# Introduction

The University of Trento

*[Name of Institution]*

supports the practice of protecting human participants in research. This form provides you with important information about about taking part in this study,

Mental navigation.

*[Research Study Name]*

Your participation in this study is entirely voluntary, and you have the right to withdraw at any time without penalty or negative consequences. If you choose to withdraw, any data collected from you will be deleted and not included in the final analysis.

# Summary

The purpose of this study is to:

*[briefly explain the purpose and objectives of the study]*

The purpose of this study is to understand the sources of variability in timing behavior in the context of mental navigation.

In this study, we will ask you to

*[describe the tasks participants will be asked to complete and any equipment they'll need]*

Participants will play a mental navigation game in which the goal is to go from a ' start image ' to a ' target image ' on a linear map. It is like walking from one shop to another on a street with eyes closed. The central image represents the current position and the one below represents the target position. Participants will use keyboard button press (left or right) to move the sequence left or right to bring the appropriate image to the centre. Initially, all images are visible for training purposes, followed by a testing phase when particpants ' mentally ' navigate to the target image. Participants will encounter cases when the sequence moves at different speeds, cued by the movement of background dots. A computer with a visual display and a keyboard will be required. Participants will perform 5 sessions in separate days

This study will take approximately 60min x 5 minutes to complete.

Taking part in this study is a great opportunity to

*[highlight any benefits or rewards participants may receive]*

This study provides an opportunity to contribute to scientific research in cognitive science and psychology. In addition, participants will receive monetary compensation.

# Risks

There may be some potential risks or discomforts associated with participating in this study, such as:

*[address any potential risks or discomforts participants may experience, including disturbing images or content]*

There are no risks associated with the task.

# Data collection and confidentiality

During this study, we will collect certain data from you, including:

*[explain what data will be collected, including any sensitive information]*

We will collect data on the precise timestamps of each button press.

This data will be used to

*[describe how the data will be used]*

The data will be used to test computational models of how error is calibrated and minimized during a cognitive task.

Your personal information will be kept strictly confidential, and all data will be anonymised and stored securely.

# Compensation

For your time and effort, you will receive compensation in the form of

*[provide details of the amount of compensation participants will receive, and any conditions required to receive it]*

We will provide compensation in the form os cash payment through Prolific. Participants must complete all 5 sessions of 60 mins each to receive the compensation.

# Contact information

If you have any questions, concerns, or feedback related to this study, please feel free to contact:

Roberto Bottini

at

roberto.bottini@unitn.it .

*[provide contact information of the study coordinator or principal investigator]*

# Statement of consent

I confirm that:

- I have read and understood the information provided in this consent form.
- I have had the opportunity to ask questions and have received satisfactory answers.
- I voluntarily agree to participate in:

  Mental navigation.

  *[Research Study Name]*

- I understand that I can withdraw from the study at any time without penalty or negative consequences.

☑ **I consent to participate**

☐ **I do not consent to participate**
